

# CUJO

## Peace-of-Mind ONLINE

SMART FIREWALL FOR HOME & BUSINESS

### Plug-and-Play

Once you plug CUJO into your router, all connected devices will be monitored.

### For Every Home

CUJO firewall is built: 1GB Ethernet ensuring that your network speed is unaffected.

### Detect Threats

We monitor all devices on your network and send alerts when threats are detected.

### Blocks Hacks and Malware

Provides real-time protection to block hacks and malicious sites.

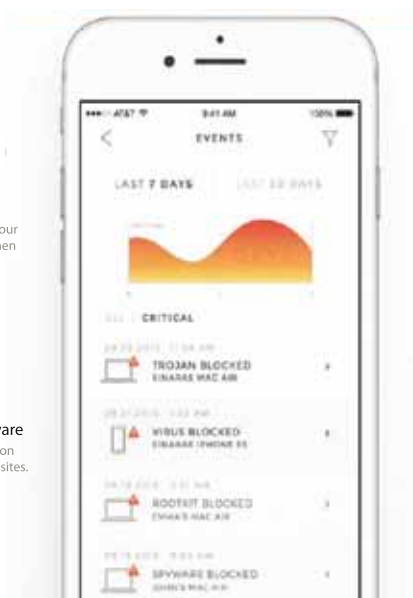

### Mobile App

Our app offer on-the-go access to your home Internet security and management. Easily secure your home from anywhere.

### Shared Intelligence

When one CUJO blocks a threat, it immediately alerts all other CUJOs. All for one, one for all.

## What is CUJO?

CUJO is a smart internet firewall. It protects all devices - from PCs to tablets and connected TVs - against cyber threats. Think of it like an ADT for your cyber security

## I already have Antivirus, why do I need CUJO?

Your phone, tablet, smart TV and thermostat are not protected. Once a criminal accesses any of them, they can get into your PC with ease.

## What is the setup process?

Plug-n-Play. Connect CUJO to any common router using an Ethernet cable. Download the CUJO app to activate it.

## What else can CUJO do?

Parental Controls and Virtual-Private-Network will be added as features later in 2016.

## How is CUJO different from old-school firewalls?

Every CUJO is connected to CUJO cloud services. Whenever one CUJO blocks a threat, all other CUJOs are immediately updated to protect from the same threat

### Safeguard Your Family

A criminal hacker enters your home through your iPhone, your computer your wifi router and your thermostat or even your fridge if its connected to the internet

### Ensure Privacy

Home hackers can access your finances by exploiting security flaws in your connected devices

### Protect Your Finances

Exposed and unsecured devices mean it's a matter of WHEN not IF, you will be hacked.
