

iHealth

Connected to my Health

I have been manufacturing medical devices for over 20 years. With iHealth, I wanted to move away from making basic medical devices to make devices that would help people to better understand the signals of their body. After all, taking a measurement is easy, it's what you do with the result that counts.

That is why I have designed the iHealth devices to be intuitive to use, to be a pleasure to use. They sync automatically with your smartphone to allow you to really understand your health and allow you to send your results to your loved ones or your doctor so that you can become an actor of your own health.

*With iHealth, I do not try to make devices, but to make tools for the heart.
I hope you love my devices as much as I do.*

Uwe Diegel
CEO, iHealthLabs Europe

NO MORE MANUAL LOGGING

1. Measure
your health

2. Track
your history

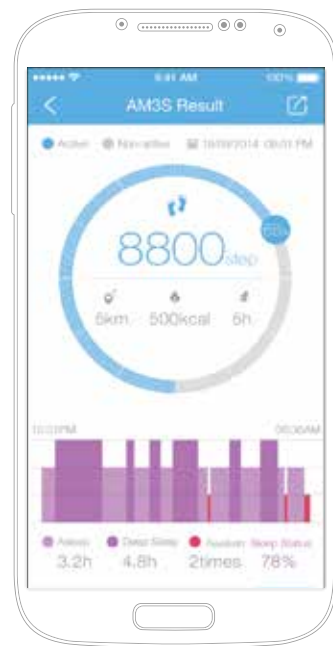

3. Share
with your loved ones

MyVitals

The best way to automatically see all your key health vitals in one place

iGluco
